

Thesis Problem Statement

Theme: AI Companions

- Build an AI Companion product for Indians.
- Should be adoptable by over 100 mn Indians.
- Should be a fun and entertainment based product, rather than pure emotional support.
- Needs to be unique and not similar to any existing product globally.

Scope: Build and Pitch the following

1. What is the product? Create a usable, high quality AI prototype end to end.
2. Suggest TAM for your product - Whom are you building for?
3. Product adoption - Why will your TAM adopt the product? Share insights.
4. Growth - If the product does not make money today, how will you grow the user base at near-zero cost? If the product makes money today, explain monetization and growth strategy.
5. What could cause your product to fail within 12 months? What are some ways to mitigate this?

Our Expectations:

1. A usable, high quality AI prototype end to end.
2. We expect an original insight driven product. Explain your assumptions with direct or indirect insights mined during ideation.
3. Please provide references that were used for developing your understanding throughout this process.
4. Things we will be looking for:
 - a. Originality, creativity and user-empathy based product building.
 - b. The depth of research (domain, and cross-sectoral) undertaken to approach the problem and propose solutions.
 - c. The depth of understanding and original insights you are able to uncover.
